Gemini

Gemini engaged Trail of Bits, Inc. (Trail of Bits), a cybersecurity research and development firm, to conduct a security review of the Gemini Smart Wallet and a separate review of the Access Manager Attestation Signer contracts.

A team of two consultants reviewed the Gemini Smart Wallet from June 9 to June 23, 2025, for a total of four engineer-weeks of effort. A team of one consultant reviewed the Access Manager and Attestation Signer contracts from July 23–25 and August 4–5, 2025, for a total of one engineer-week of effort.

During the Smart Wallet review, Trail of Bits identified five high-severity issues, three low-severity issues, and four informational issues. Of those issues, Trail of Bits determined that Gemini has resolved four issues (one high-severity and three low-severity), has partially resolved three issues (two high-severity and one informational), and has not resolved the remaining five issues (two high-severity and three informational).

During the Access Manager and Attestation Signer contract reviews, Trail of Bits identified one high-severity issue, two medium-severity issues, and two low-severity issues.

Sincerely,

Benjamin Samuels
