Project Summary

Contact Information

The following project manager was associated with this project:

Mary O'Brien, Project Manager
mary.obrien@trailofbits.com

The following engineering director was associated with this project:

Benjamin Samuels, Engineering Director, Blockchain
benjamin.samuels@trailofbits.com

The following consultants were associated with this project:

Simone Monica , Consultant simone.monica@trailofbits.com	Jaime Iglesias , Consultant jaime.iglesias@trailofbits.com
---	--

Project Timeline

The significant events and milestones of the project are listed below.

Date	Event
August 14, 2026	Delivery of final summary report

Project Targets

The engagement involved reviewing and testing the following target.

nitro-contracts

Repository <https://github.com/OffchainLabs/nitro-contracts>

Version **PR#439**

Type Solidity

Platform Arbitrum

Executive Summary

Engagement Overview

Offchain Labs engaged Trail of Bits to review the security of the TipCollectionToggler contract.

The TipCollectionToggler contract is a manager-like contract that, after being added as chain owner for a specified duration, allows a trusted party to call the `SetCollectTips(bool)` function in the `ArbOwner` precompile. When enabled, priority fees are collected by the network fee account instead of being dropped.

A team of two consultants conducted the review on July 20, 2026, for a total of two engineer-days of effort. With full access to source code and documentation, we performed static and dynamic testing of the target, using automated and manual processes.

Observations and Impact

The main focus of the review was to ensure the implementation respected the design. In particular, we assessed whether access controls are in place, that the contract can be removed as the chain owner after a fixed amount of time has passed, and that the contract correctly turns on/off the collection of tips.

No issues were identified during this review.

About Trail of Bits

Founded in 2012 and headquartered in New York, Trail of Bits provides technical security assessment and advisory services to some of the world's most targeted organizations. We combine high-end security research with a real-world attacker mentality to reduce risk and fortify code. With 100+ employees around the globe, we've helped secure critical software elements that support billions of end users, including Kubernetes and the Linux kernel.

We maintain an exhaustive list of publications at <https://github.com/trailofbits/publications>, with links to papers, presentations, public audit reports, and podcast appearances.

In recent years, Trail of Bits consultants have showcased cutting-edge research through presentations at CanSecWest, HCSS, Devcon, Empire Hacking, GrrCon, LangSec, NorthSec, the O'Reilly Security Conference, PyCon, REcon, Security BSides, and SummerCon.

We specialize in software testing and code review assessments, supporting client organizations in the technology, defense, blockchain, and finance industries, as well as government entities. Notable clients include HashiCorp, Google, Microsoft, Western Digital, Uniswap, Solana, Ethereum Foundation, Linux Foundation, and Zoom.

Test Coverage Disclaimer

Trail of Bits performed all activities associated with this project in accordance with a statement of work and an agreed-upon project plan.

Security assessment projects are time-boxed and often rely on information provided by a client, its affiliates, or its partners. As a result, the findings documented in this report should not be considered a comprehensive list of security issues, flaws, or defects in the target system or codebase.

Trail of Bits uses automated testing techniques to rapidly test software controls and security properties. These techniques augment our manual security review work, but each has its limitations. For example, a tool may not generate a random edge case that violates a property or may not fully complete its analysis during the allotted time. A project's time and resource constraints also limit their use.
